1  # Test
2  import math
3
4  '''
5  List comprehensions is a way to build lists from sequences or
6  any other iterable type by filtering and transforming items.
7  '''
8
9  '''
10 The general syntax for a list comprehension is as follows:
11 [expression for item in iterable if condition]
12 '''
13
14 # List Comprehensions are used for building a new list
15 # Square Numbers_And_Booleans in the list. Using 'for' loop
16 nums = [1, 2, 3, 4, 5]
